Backend-focused full-stack engineer on a production multi-tenant community platform (AdonisJS, Next.js, MySQL, MongoDB, Redis); side projects in TypeScript and Go on caching, job scheduling and API tooling.

Experience

Full Stack Developer Sep 2025 – Present
AppifyLab – EzyCommunity, a multi-agency, multi-tenant community platform *Bangladesh*

- Implemented content moderation: a new moderator permission in the RBAC system, soft deletes, pending-post and pending-edit review queues, and community-scoped queries that enforce tenant isolation.
- Reworked the real-time home and channel feeds: a "new posts" pill that never inserts live posts unasked, infinite-scroll performance and layout-shift fixes, and cursor pagination for comments.
- Improved Redis channel-cache invalidation; built a website-builder settings area (fonts, colour variables, custom CSS/JS); contributed to Stripe-backed checkout for paid channels.
- Shipped invite links, gamification, an image cropper and notification unsubscribe – 550+ non-merge commits since Feb 2026 across the AdonisJS API and Next.js frontend (MySQL, MongoDB, Redis).

.NET Developer Trainee Dec 2024 – Apr 2025
Learnathon by Geeky Solutions – Team "Brainstormers" *Certificate*

- Built TaskForge.NET, a task-management system in ASP.NET Core MVC following Clean Architecture and SOLID: task CRUD, user assignment and status tracking on SQL Server via Entity Framework Core.
- Worked in a team of 3 with a GitHub pull-request workflow and code review.

Projects

MockFlow | *AdonisJS 6, TypeScript, Next.js, PostgreSQL, Redis* May 2026 – Present

- API mock-server platform where frontend and QA teams design, document and serve mock REST endpoints before the backend exists; route matching by specificity, faker.js templates, scenarios and randomised delays.
- OpenAPI 3.x and Postman v2.1 export with two-phase (preview → apply) import; version-history snapshots with automatic backup before every restore; role-based teams and a super-admin console.
- Redis caching with single-flight, negative caching, TTL jitter and tag-based invalidation; strict Controller → Service → Query → Model layering; ∼178 unit and ∼75 integration tests (Japa).

local-scheduler | *Go, SQLite, Docker* Oct 2026 – Present

- Self-hosted job scheduler shipped as a single binary with embedded SQLite and an HTTP/JSON API (OpenAPI 3 spec): cron or one-time jobs with time zones that make HTTP calls or run shell commands.
- No-overlap rule, a single catch-up run for missed schedules, graceful shutdown that drains running jobs for 30 s, and crash recovery; an end-to-end script drives the real binary through restarts and `kill -9`.

Audio Visualizer | *AdonisJS 7, Next.js 16, React 19, MongoDB, Web Audio API* Mar 2026 – May 2026

- Real-time frequency-bar and waveform rendering for MP3/WAV/FLAC, with upload, streaming and delete endpoints, drag-and-drop upload and playback controls (live demo).

Technical Skills

Languages: TypeScript, JavaScript, Go, C#, C++, Python, SQL
Backend: AdonisJS, Node.js, ASP.NET Core, REST API design, OpenAPI
Frontend: Next.js, React, Tailwind CSS
Data: PostgreSQL, MySQL, MongoDB, Redis, SQLite
Practices & Tools: Git/GitHub, Docker, Linux, automated testing (Japa, Go test), Clean Architecture, SOLID

Education

B.Sc. in Computer Science and Engineering | CGPA 3.68 / 4.00 Jan 2020 – Jul 2025
Sylhet Engineering College, affiliated with Shahjalal University of Science and Technology *Sylhet, Bangladesh*

Achievements & Leadership

- 1800+ problems solved across online judges; Codeforces Specialist (max 1476); CodeChef 3-star (1744).
- 14th at MU IUPC 2024 (Sylhet Division), 89th at DUET IUPC 2025, 97th at NCPC 2023 (held Mar 2024).
- Coordinator, SEC Programming Club (2024 – 2025): organised internal selection contests and warm-up sessions; managed IUPC team registration.
